

RANCE PROTOCOL

Insure your crypto assets

Rance Protocol is a decentralized price shield insurance provider offering long-term crypto holders the insurance of the major price swing of their holdings. It is the first insurance protocol with cross-chain compatibility.

Users will be able to convert their tokens into the Liquidity they initially purchased the token after a year with a 50% insurance fee. Rance Protocol gives users the confidence to explore the DeFi world and go on their staking and farming journey with peace of mind.

PROBLEMS WE ARE TRYING TO SOLVE

Rance Protocol is the first of its kind in the cryptosphere, offering users the insurance they have long been yearning for. Due to the recent bear market, people are scared to buy coins even the ones with strong fundamentals because of fear of major price movements and swings.

Rance Protocol gives long-term holders the confidence of holding their favourite coins, with no fear of major price movements because they can always retrieve the coins at the initial rate they bought once their insurance package expires.

FEATURES OF RANCE PROTOCOL

Users can purchase approved tokens at a 50% increase of the market rate to take a dive into the DeFi world and enjoy their staking and farming returns. After a year, users can choose to sell back the token to the protocol at the same market rate they bought the token a year ago minus the 50% fee. Or rather sell at the current rate on DEX or CEX.

For example, the current market rate of MMF is \$1 and a user wants to buy 1000 MMF from the protocol. They'll be required to pay \$1,500 for 1000 MMF instead of \$1000. They can use this 1000 MMF for staking and farming on the MMF ecosystem and earn over 2000%+ Apr in farm.

After a year, the user have 30 days to decide if they'll sell the MMF back to the Protocol at the initial price of \$1, where the Protocol will give them \$1,000 for their 1000 MMF or if the user will sell at a DEX like MMFinance for the current rate.

If the price of MMF is above \$1 at that time, let's say \$23, the Protocol will still buy it from the user at \$1. So it will be more profitable to the user to sell it at a DEX to get the current rate. If the price of MMF is below \$1 at that time, let's say \$0.2, the user can still swap it at the protocol for \$1. Hence, Rance Protocol has shielded the user of any price impact for a whole year.

COINS AVAILABLE FOR INSURANCE

The Protocol is cross-chain compatible bringing popular coins like **BTC, ETH, MATIC, MMF, CRO, BNB, ADA, DOGE, XRP, LTC, DOT, LINK, CAKE, TRX, UNI, SUSHI, AXS & TWT**. While **RANCE** and other Coins will be approved much later by the community.

INSURANCE PACKAGES

The protocol will be launching with three types of insurance duration available. The 6 months insurance comes with a 100% insurance fee, while the 1 year insurance comes with a 50% insurance fee. While the 2 years insurance comes with a 25% insurance fee.

- **6 Months Insurance:** Out of the **100%** of the insurance fee gotten from each trade for the 6 months plan. **95%** will be stored as the protocol's liquidity for users that will choose to later sell us their token after 6 months. **2.5%** will go to the funds used to buy back the protocol's governance token RANCE, from the market, once a month. **1.5%** will be sent to a pool where users can stake the governance token and earn USDC. **1%** will be sent to the team for marketing, partnerships and running the protocol.

- **1 Year Insurance:** Out of the **50%** of the insurance fee gotten from each trade for the 1 year plan. **45%** will be stored as the protocol's liquidity for users that will choose to later sell us their token after 1 year. **2.5%** will be used to buy back the protocol's governance token RANCE, from the market, once a month. **1.5%** will be sent to a pool where users can stake RANCE and earn USDC. **1%** will be sent to the team for marketing, partnerships and running the protocol.

- **2 Years Insurance:** Out of the **25%** of the insurance fee gotten from each trade for the 2 years plan. **20%** will be stored as the protocol's liquidity for users that will choose to later sell us their token after 2 years. **2.5%** will be used to buy back the protocol's governance token RANCE, from the market, once a month. **1.5%** will be sent to a pool where users can stake RANCE and earn USDC. **1%** will be sent to the team for marketing, partnerships and running the protocol.

RANCE TOKEN USECASE

RANCE Token is the governance token of Rance Protocol, it will be used to exclusively end an Insurance package before it's due time. Holders of RANCE will enjoy revenue sharing with the team (1.5% of the insurance fee) by staking their token to earn a stablecoin and also the usual stake **RANCE earn RANCE**. It will also be the governance token used to decide the coins that can be added for insurance on the protocol in the future.

TOKENOMICS

RANCE is a deflationary digital currency with total capped supply of **10,000 \$RANCE**

Initial Supply

(2,000) for
Launchpad

(500) for
Initial Liquidity

(4,000)
reserved as
backing for the
protocol insurance
liquidity

(2,500)
used to staking
and other
incentives

(1,000)
allocated to the
team and vested

ROADMAP

- Development of the Protocol
- Initial DEX Offering
- Insurance Packages go LIVE
- Staking
- CMC and CG Listing
- Marketing
- Expansion with more chains added
